

IMAGE DISPLAY WITH CONFIGURABLE LETTERING

Abstract

A display having configurable lettering includes a base, a plurality of tiles, and a tile carrier. The base includes at least one display window disposed inside a perimeter of the base and at least one recess portion, and the plurality of tiles have an upper side and a lower side. A top portion of the tile carrier retains the upper side of the plurality of tiles, and a lower portion of the tile carrier retains the lower side of the plurality of tiles. The tile carrier is configured to be retentively engaged by the at least one recessed portion when the tile carrier is disposed therein.
